Biotics Research is pleased to announce a new product, **Berberine HCl**. Each capsule supplies 500 mg of Berberine Hydrochloride and there are 90 capsules per bottle.

Berberine is a bitter-tasting alkaloid that has a long history of use in both Chinese and Ayurvedic medicine, primarily to support gastrointestinal function. Berberine has demonstrated significant activity against a wide variety of organisms including a broad spectrum of bacteria, yeasts, fungus and parasites. Its mechanism of action is thought to result in part from its characteristic structure, which is that of a planar catonic molecule. In addition, Berberine has been shown to be supportive of healthy blood sugar levels, including fasting and postprandial blood glucose, and HbA1c as well.\(^1\) Berberine has also been shown to be supportive of normal blood lipid levels, with the apparent mode of action being described as an increase in the production of a receptor protein in the liver which binds LDL-cholesterol, preparing it for elimination.\(^2\)
