

# Caprin™

Calcium / Magnesium Caprylate

Each capsule supplies 400 mg of caprylic acid as calcium / magnesium caprylate, in a delayed release formulation.

*Candida albicans*: A yeast, belonging to the mold and fungi family, having the potential to negatively impact health. Candida can grow on moist tissues lining the body (mucous membranes). Candida and other yeasts live in the intestine, but are usually held in check by friendly gut bacteria and the immune system. Candida can spread when the immune system weakens. Antibodies can also decline when broad-spectrum antibiotics kill healthy gut bacteria. Diet can also be a contributing factor when it consists largely of refined carbohydrates and refined sugar.<sup>(1,2)</sup>

*Candidiasis*: This condition occurs when Candida (yeast) infects the skin and mucous membranes of the body. Typically, candidiasis occurs in the colon, vagina, mouth, throat, lungs or nails. Symptoms of intestinal candidiasis can be present as headaches, confusion, and loss of energy, to chronic fatigue, cramps, bloating, rectal itching and gas.<sup>(3)</sup>

*Internal Candida Stasis*: **Caprin™** provides nutritional support to help balance the intestinal flora by assisting in the maintenance of internal candida stasis.
